# **Management Accountancy**

# Unit 3

# Income Recognition, Measurement and Reporting

- Concept of variable and absorption costing
- Income statement under variable and absorption costing methods
- Profit reconciliation between variable and absorption costing approaches

# After the completion of this unit, you should be able to:

- Understand the meaning of absorption costing and variable costing
- Appreciate the method of inventory valuation technique under variable and absorption costing
- Differentiate between variable and absorption costing
- Prepare the profit reconciliation between variable and absorption costing approaches, and explain the possible reasons

# 3.1 Reporting of net income under different situations for internal and external use

The main difference between absorption costing and variable costing are as follows :

| S.N. | Variable Costing   | Absorption Costing  |
|------|--|---|
| 1.   | Only variable manufacturing costs are<br>included in cost of production for<br>inventory valuation purposes. It includes<br>direct materials, direct labour and<br>variable factory overhead in production<br>costs.<br>Inventorial cost for inventory valuation<br>Direct Materials Cost<br>+<br>Direct Labour Cost<br>+<br>Variable Manufacturing Overheads<br>Cost (VMOH)<br>=<br>Total Variable Manufacturing Cost | All the manufacturing costs are charged to cost<br>of production for the inventory valuation<br>purposes. According to this technique, direct<br>material, direct labour, direct expenses, variable<br>factory overhead and fixed factory overhead<br>expenses are included in production cost.<br>Inventorial cost for inventory valuation<br>Direct Materials Cost (DM)<br>+<br>Direct Labour Cost (DL)<br>+<br>Variable Manufacturing Overheads Cost<br>(VMOH)<br>+<br>Fixed Manufacturing Overhead Cost (FMOH)<br>=<br>Total Manufacturing Cost |
| 2.   | Cost are classified on the basis of behavior of cost, i.e., variable and fixed costs.  | Cost are classified on the basis of function of cost, i.e., manufacturing and non-manufacturing costs.  |
| 3.   | Over and under absorption of fixed ma-<br>nufacturing overhead does not arise as<br>only variable cost is charged to product.  | As it includes fixed manufacturing cost in stock valuation, the problem of over and under   |

|    |   | absorption of fixed manufacturing overhead      |
|----|---|---|
|    |   | arises.   |
| 4. | Managerial decision is made on the basis    | Managerial decision is made on the basis of net |
|    | of contribution margin. If the sales        | income. If the sales revenue is more than total |
|    | exceed to total variable cost, contribution | costs, it results profit.                       |
|    | margin continues to increase.               |   |
| 5. | Variable costing is suitable for internal   | Absorption costing is suitable for external     |
|    | reporting.                                  | reporting.                                      |
| 6. | Profit is result of only sales volume.      | Profit is result of both production and sales   |
|    |   | volume.   |
| 7. | Income Statement                            | Income Statement                                |
|    | Sales Revenue XXX                           | Sales Revenue XXX                               |
|    | Less: Total Variable Cost (VC) XXX          | Less: Total Manufacturing Cost XXX              |
|    | Contribution Margin (CM) XXX                | Gross Margin (GM) XXX                           |
|    | Less: Fixed Cost (FC) <u>XXX</u>            | Less: Total Non-Manufacturing Cost XXX          |
|    | Profit <u>XXX</u>                           | Profit <u>XXX</u>                               |
| 8. | Contribution Margin                         | Gross Margin                                    |
|    | = Sales Revenue – Variable Cost             | = Sales Revenue – Manufacturing Cost            |

## **3.2 Results**

The relationship between production, sales and income is presented as below :

| Conditions                    | Inventory Level                | Profit Between Absorption<br>Costing and Varaible Costing         |
|-------------------------------|--------------------------------|---|
| 1. Sales is equal to          | No change in inventory level   | No difference in profit   |
| 2. Sales less than            | Increase in                    | Absorption costing reports more                                   |
| production.                   | inventory level                | profit than Variable costing                                      |
| 3. Sales exceed to production | Decrease in<br>inventory level | Absorption costing reports lesser<br>profit than Variable costing |

## 3.3 Reconciliation of net income between variable costing and absorption costing

It is clear from the above discussion that sometimes the profit reported by absorption costing may be different and sometimes equal. The different net income figure is reported on account of fixed manufacturing overhead recognised as expenses under the two methods. The net profit of both methods will be equal if the sales and products are equal. If the sales and production are different, the profit reported by variable costing and absorption costing will also differ. The amount of difference between the profits of two methods will be equal to difference between the amount of fixed overhead assigned to inventory on two methods.

i.e. [Difference in Profit between AC & VC] = [Difference in Fixed Cost Assigned to Inventory under AC & VC]

## **Profit Reconciliation Statement**

## **ILLUSTRATION 1**

A manufacturing Company with normal capacity of 80% furnished you the following information:

| Production Units                      | 40,000       |
|---------------------------------------|--------------|
| Sales Units                           | 50,000       |
| Closing Stock                         | 10,000 units |
| Fixed Factory Overhead Incurred       | \$ 2,40,000  |
| Fixed Selling and Administrative Cost | \$ 1,00,000  |
| Variable Selling Cost per Unit \$ 2   |              |
| Selling Price per Unit \$35           |              |
|                                       |              |

The installed production capacity of the plant is 60,000 units and manufactu-ring cost at normal capacity of 80% are budgeted as follows :

| Direct Material Cost per Unit | \$<br>10 |
|-------------------------------|----------|
| Direct Labour Cost per Unit   | \$<br>5  |
| Direct Expenses Cost per Unit | \$<br>4  |

Required: Income Statement under Variable and Absorption Costing.

## SOLUTION:

Installed Capacity of the Plant = 60,000 units Normal Capacity = 60,000 × 80% = 48,000 units. Actual Output = 40,000 units. Fixed Factory Cost per Unit =  $\frac{2,40,000}{48,000}$ = \$ 5 per unit Under Absorption of Fixed Cost = (48,000 - 40,000) × 5 = \$ 40,000. Opening Stock in Units = Closing Stock + Sales - Production = 10,000 + 50,000 - 40,000 = 20,000 units.

|  | \$        | \$        |
|--|-----------|-----------|
| Sales Revenue –50,000 units @ \$ 35 each         |           | 17,50,000 |
| Less : Variable Cost of Sales :                  |           |           |
| Direct Material @ \$ 10 per unit                 | 4,00,000  |           |
| Direct Labour @ \$ 5 per unit                    | 2,00,000  |           |
| Direct Expenses @ \$ 4 per unit                  | 1,60,000  |           |
| Total Variable Manufacturing Cost                | 7,60,000  |           |
| Add : Opening Stock $(20,000 \times 19)$         | 3,80,000  |           |
|  | 11,40,000 |           |
| Less : Closing Stock $(10,000 \times 19)$        | 1,90,000  |           |
| Variable Cost of Sales                           |           | 9,50,000  |
| Gross Contribution Margin                        |           | 8,00,000  |
| Less : Variable Selling Cost $(40,000 \times 2)$ |           | 80,000    |
| Net Contribution Margin                          |           | 7,20,000  |
| Less: Fixed Cost :                               |           |           |
| Factory Overhead                                 | 2,40,000  |           |
| Selling and Administrative                       | 1,00,000  |           |
| Total Fixed Cost                                 |           | 3,40,000  |
| Net Income                                       |           | 3,80,000  |

# Income Statement under Variable Costing

| Income Statement under Absorption Costing              |           |           |

|--|----------|------------|--|
|  | 19 ×1    | 19 ×2      |  |
| Net Income as per Absorption Costing     | 3,00,000 | 2,25,000   |  |
| Net Income as per Variable Costing       | 1,50,000 | 3,25,000   |  |
| Difference in Profit                     | 1,50,000 | (1,00,000) |  |
| Beginning Inventory in Units             | _        | 30,000     |  |
| Ending Inventory in Units                | 30,000   | 10,000     |  |
| Difference in Inventory                  | 30,000   | (20,000)   |  |
| Normal Fixed Manufacturing Overhead/Unit | \$ 5     | \$ 5       |  |
| Difference in Stock Valuation            | 1,50,000 | (1,00,000) |  |

### Alt. Method:

### **Reconciliation Statement**

|   | 19 ×1    | 19 ×2    |
|---|----------|----------|
| Net Income as per Absorption Costing          | 3,00,000 | 2,25,000 |
| Less : Fixed Overhead in Closing Stock @ \$ 5 | 1,50,000 | 50,000   |
|   | 1,50,000 | 1,75,000 |
| Add: Fixed Overhead in Opening Stock @ \$ 5   | 0        | 1,50,000 |
| Net Income as per Variable Costing            | 1,50,000 | 3,25,000 |

#### Alt. Method:

| <b>Reconciliation Statement</b>        |          |            |  |
|--|----------|------------|--|
| Difference in Profit (AC – VC)         | 1,50,000 | (1,00,000) |  |
| Fixed Overhead in Opening Stock        | 0        | 1,50,000   |  |
| Less : Fixed Overhead in Closing Stock | 1,50,000 | 50,000     |  |
| Diff. in Stock Valuation               | 1,50,000 | (1,00,000) |  |
